A better environment for refugees and host populations in Maraach, Lebanon

Consultation with community members of Maraach, Bourj Hammoud on project design and implementation. © UN-Habitat Lebanon

“Due to my family’s economic situation, I couldn’t pay my university tuition fees. Through my experience in the rehabilitation of electrical wires for the past three months, I was able to secure money for my tuition fees and gain skills in a new field.”
Alaa Soultan, a Syrian refugee.

Maraach, one of the most densely populated areas in the Middle East has over 6,000 residents, of whom 60 per cent are vulnerable Lebanese and 40 per cent Syrian refugees and other nationalities. Residents face many challenges including poverty, limited access to water and electricity, exposed unsafe electrical wiring and run-down buildings and common spaces which were badly damaged by the Beirut Port explosion last year. Thanks to funding from Poland, the project is helping to rehabilitate buildings and public spaces, improve street mobility, safety, and access to basic urban services. Installation of a solar energy system will provide greener, cheaper electricity to the community and power streetlights to improve safety. By engaging residents such as Alaa Soultan, a Syrian refugee in cash-for-work programme, the project is enabling them to earn a living while helping to curb the spread of COVID-19 as one of the cash-for-work programmes for women has so far produced 4,500 reusable face masks and 720 tote bags used in a door-to-door awareness campaign on solid waste management, reduction and reuse. UN-Habitat and the Polish Centre for International Aid (PCPM) have also trained and distributed fire-fighting equipment to 54 community members including a fire engine with a high-pressure pump for dense urban areas to be used by the Lebanese Civil Defence Centre in Bourj Hammoud which was rehabilitated by its members. *“We earned some money to support our families while improving the conditions of our working environment,”* said Garine who volunteers at the Centre.

Equity Park promotes social integration in Cancun, Mexico

Participatory activities for the planning and design of the Parque de la Equidad. © Fundación Hogares, 2020

Equity Park is an urban planning initiative that prioritizes public space to promote sustainable development and reduce urban segregation and social inequality in Cancun, a city that lacks public spaces and green areas. UN-Habitat Mexico collaborated with The Agency of Strategic Projects of the state of Quintana Roo (AGEPRO) to develop the Master Plan for the Parque de la Equidad (Equity Park), in the touristic city of Cancun. The park will be the largest public space project of the city and will have an area of more than 2,064 hectares with an extension of more than 16 kilometers. It is designed to be a safe, inclusive, accessible, green, and quality public space project that will directly benefit nearly 200,000 people living in the nearby area and improve the environment for all the city’s population. The Master Plan was developed using strong social participatory approach involving local actors including authorities, private sector, academia, civil society, and especially target beneficiaries, taking part actively to identify challenges and propose solutions to address their main needs. UN-Habitat developed mechanisms to maximize participation, adapted to pandemic conditions and security measures, to facilitate identification of local knowledge, collective imagination, and citizens’ main aspirations for public space and improved quality of life. These included activities and virtual events for children, youth and the wider community which attracted 2,472 participants as well as technical consultative sessions which convened some 209 participants from local strategic stakeholders from the government, academia, business, collectives, and civil associations. The Master Plan and the conceptual design process of the Park are now complete and are ready for implementation.

Annual Report 2020

UN-Habitat's first [annual progress report on the implementation of the strategic plan 2020-2023](#), published this month, summarizes UN-Habitat's achievements in the first year of the Plan which have focused on the most pressing areas of development such as poverty reduction, prosperity, strengthening climate action and preventing urban crisis. The report underscores how the strategic plan remains relevant, even in a changing global environment, demonstrating the robustness and flexibility of the organization's four-year framework. The annual report is structured around the strategic plan's four domains of change. It highlights UN-Habitat's catalytic role to support achievement of the urban dimensions of the sustainable development agenda, an approach which resonates with strategic partners, and presents innovative urban solutions and ideas. It offers recommendations to advance implementation the strategic plan including planning in line with set targets that take into account secured funding, strengthening the organization's catalytic role, and adaptation of responses to meet local, country and regional priorities.
